

MLS - Class 4 Laser Therapy

Your partner in pain management

MLS Class 4 laser therapy is used extensively in veterinary practice to treat a wide range of inflammatory and painful conditions, as well as stimulate wound healing in companion animals and exotics.

Class 4 laser therapy is seen as an effective alternative to NSAIDs, reducing pain and inflammation quickly, by significantly decreasing COX 2 inflammatory mediators, stimulating tissue perfusion and metabolism. The clinical benefits are quickly seen in patients and recognised by owners. Laser therapy provides the opportunity for the nursing team to interact more with patients, building client loyalty and practice revenue.

Clinical Indications:

Osteoarthritis:

Osteoarthritis is the most common clinical indication with significant pain and inflammation reduction after 5-6 treatments (1 month)

Post op pain management:

Laser therapy is also routinely used for post op pain management, reducing pain significantly and speeding healing, so it is an effective alternative to NSAIDs

Wound Healing:

Laser therapy significantly increases wound healing and reduces bacterial load during healing

Inflammatory Skin Conditions:

Due to the anti-inflammatory effects (COX 2 reduction) laser therapy can be used to treat a wide range of inflammatory and painful skin conditions, including gingivitis, stomatitis, lick granulomas, otitis, dermal hot spots, anal sacculitis etc

Features

Many clients prefer MLS Class 4 laser therapy: to treat their pets as there are no side effects, and the clinical benefits are quickly seen for a wide range of inflammatory and painful conditions.

MLS – the safest Class 4 laser system: The unique pulsed and continuous synchronised wavelengths (808nm continuous and 905nm pulsed) produce a peak power of 75W, ensuring deeper tissues receive the maximum therapeutic effect, whilst allowing heat to dissipate between pulses, so superficial tissues do not overheat.

Increased client loyalty: increased contact between patients, clients and the clinical team during treatment, increases client loyalty and repeat business for the practice.

Income Generation: MLS Class 4 laser therapy represents additional revenue streams for the practice with rapid return on investment.

Training: Full after sales, hands on training provided by veterinary physiotherapists, combined with certified interactive online CPD, ensures your practice gets the most benefit from the MLS laser system.

ASA Laser: ASA are the largest manufacturer of veterinary laser with over 2000 installations globally. ASA have extensive research facilities and published peer reviewed papers.

3 week trial: The MLS laser system is available for a 3 week, no obligation trial – so call CelticSMR to see the therapeutic benefits Class 4 laser therapy can bring your practice.

What do vets, nurses and owners say?

Dr S Mohammed Deputy Chair of NAVP
(National Association of Veterinary Physiotherapists)

“The MLS laser is a unique, easy to use system. The key feature is I can address the individual needs (e.g. pain relief and/or anti-inflammatory effects) of each patient by varying the frequency and mode of application of the MLS laser unit. By making the patient central, the MLS laser system enhances my ability to treat patients. Celtic SMR was a natural choice in choosing a laser system supplier because of the high level of customer care and technical support.”

Dr Chris Vogt - Practice Principal and Veterinarian
BSc BVSc BSAVA PGCert (SAS) MRCVS Polslow
Veterinary Clinic and Cranbrook Veterinary Centre

“The addition of laser clinics within our practice has been met with much enthusiasm from our clients. The ease of use, coupled with fantastic hands on training and support from Celtic SMR has meant that the clinics have been easy to set up and run. It has made a great difference to many families who can see a significant difference in the well being of their beloved pet!”

Jay Lisher RVN On duty veterinary nurse
consultant Coastway Vets Brighton

“Since purchasing the MLS Laser from CelticSMR we have seen excellent results in a range of conditions, with over 90% of patients seeing a substantial improvement. The equipment is easy to use, with the standard protocols being very effective. CelticSMR have been extremely helpful with both the theory and practical training.”

Robert Baker Owner of Max

“Over the years my 13 year old dog Max has become very lame with arthritis and we were wondering if we were being fair to keep him going. Alistair Ball from Coastway Vets in Shoreham, suggested trying a new Laser therapy they were trialling. The day after Max's first treatment, much to our surprise, the lameness in his shoulder had gone even though we were told not to expect obvious results immediately the affects of Laser Therapy are cumulative. We are so impressed with the results of these sessions and can't believe how much Max is enjoying his life and walks again. Even other dog walkers that we meet have commented on how much better he looks. We are delighted we can give Max a happy, comfortable old age.”
