

Upgrading your existing CR system?

If you are considering upgrading your existing CR system, have a free side by side comparison with Agfa's popular CRI5X and see the improvement in image resolution and intuitive work flow. In trials 8 out of 10 vets have chosen the Agfa CRI5X, so see the difference yourself. CelticSMR offer generous trade-in terms for your existing CR or DR.

Agfa - CR and DR technology at its very best

MUSICA

MUSICA 3: This compact hi-speed table top system provides outstanding resolution with

Musica 3 Agfa's gold standard image processing software, customised to optimize small animal images, automatically analysing the characteristics of each raw image and optimizing the processing parameters, independent of body part or dose deviation. Calibration and processing are completely automated giving you maximum detail – first time, every time

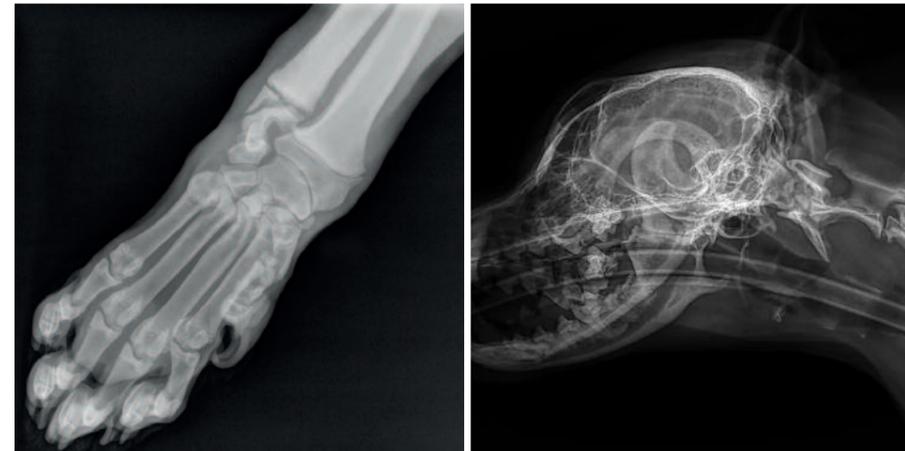

NX3: The intuitive NX3 software speeds workflows and has a user friendly, intuitive format, which makes it the most popular digital software for vets.

Build Quality: Agfa's renowned robust build quality provides many years trouble free service backed up by a 5 year parts warranty.

Technical Features:

- Hi-speed automated CR system
- Unrivalled image quality from Agfa's patented Musica 3 image processing software
- Intuitive NX3 software for ease of use and fast workflows
- Dental cassette with magnetic intra oral plates for easy loading
- Software developed specifically for small animal and equine applications
- Software common to Agfa DR so seamless transfer from CR to DR
- DICOM/PACS conformant
- 5 years parts warranty
- UK wide network of Agfa engineers for after sales support

CR technology at its very best

Dental Cassette: The Agfa CRI5X includes the unique dental cassette which has a range of magnetic dental plates for easy loading, including 2cm x 3cm (periapical), 4cm x 4cm, 3cm x 5cm, 6cm x 7cm (occlusal), 8cm x 10cm (turbinates). The dental cassette facilitates routine periodontal disease screening, producing excellent images within 60 seconds.

Needle plate technology: Available on the 24 x 30cm cassettes gives DR equivalent resolution in a CR package, (optional).

Income generation: With greater clinical detail and faster workflows investing in the CRI5X generates significant increases in revenue from radiography (anecdotal feedback suggests over a 30% increase in most practices).

Upgrade your existing CR: Compare the performance of your existing CR with Agfa's latest CRI5X with Musica 3 in a free side by side trial.

What do vets say?

Rob Rayward MA VetMB DSAS (Orth) MRCVS, Coast Veterinary Referrals Limited

"Having run a mobile orthopaedic service for many years I was accustomed to using various radiography suites. This gave me a good insight into various generators and processors that are on the market. A number of the clinics that we visited used the AGFA 30-X which I found to be simple to use; to consistently produce good quality images and to allow easy manipulation and measurement of radiographs to assist in orthopaedic surgical planning.

When we moved to fixed premises in 2017 I was keen to get a similar system and subsequently purchased the AGFA-15X. Celtic SMR have been very helpful and informative throughout the process of selecting and installing a system suitable to our needs. The 15-X has proved to be very similar to the 30-X with regards to simplicity of use, image quality and manipulation of images but with the added advantage of being smaller and easier to accommodate within our clinic. All members of staff find it simple and easy to use.

Digital radiography has allowed us to readily store the images and to display them in theatre and to clients in the consulting rooms, further enhancing the service that we can offer."

Over 800 vets can't be wrong

Over 800 vets have chosen the Agfa CR for the superior resolution, ease of use, workflow and build quality so have a free side by side comparison with your existing CR – see the difference
